This means that there is a universe of multiple apps for Roku, and you can find them with your browser. They are easy to install if you know where to look. What is a private channel and why are they private? Private channels are channels that are part of the official Roku channel store, but do not appear publicly. This means that they do not seem to average Roku users when they click through the channel store on the remote control, or search for channels on the Roku website. Some of these channels are private because they are in beta and not ready for a full release. Some require a membership and are hidden so average Roku users don't stumble over and install them. Some content offer types Roku will not have publicly visible in the channel store. Others may be unofficial, third-party channels for various websites and other services, such as Twitter. Find a private channel you want to install first, you need to find the private channel you want to install. Searching for Roku private channels or Roku private channel [topic] will help you a lot here. But that's how you get started. The Nowhere Man has created a number of private channels you can install, including clients for Twitter, Vine, CNN, USTREAM.tv, Songza and khan academy. There's even Nowhere Bullet, a PushBullet screen protector that can display notifications on your Android phone or tablet on your TV. He also offers Nowhere TV - a popular private channel that presents free online video content from a variety of websites in a convenient interface. You will also find directories of Roku private channels on other websites. Take a look at streamfree.tv or the one on mkvXstream to browse what's available. Look for a private channel code, or a link you can click. The link will be in the form - it is just an easy way to enter the code in Roku's website. Add Private Channel You now need to add the private channel to your Roku. This process is mostly carried out in your browser, as it is not possible to enter a private channel code on Roku itself. Sign in to your account on the Roku website and access the My Account page. Click the Add a channel link. You must use the same Roku account you connected to your Roku. Enter the code of your private channel — also known as a channel access code or invitation code — in the box on Roku's website. Click add channel and the channel will be added to your roku account and queued for installation on Roku. Then go to your roku. The channel will appear on Roku within 24 hours when it automatically checks for updates, but you don't have to wait. If you want it to check for and download the private channel immediately, open the Settings screen, select System, select System Update, and select Check Now. The Roku automatically downloads any new private channels you've added. Start watching the private channel Once the private channel is installed, it will appear with all your other installed channels on the Roku home screen. The private channel comes from the same Roku channel store your other channels come from, and it will be updated automatically as they like. You can remove a private channel that you want to remove another channel. Just select it on the Roku home screen with the remote control, press the \* button, and select the option to remove it.
